PROJECT TITLE: Repair Entrance Road, Culverts, and Replace Revetments

LOCATION: Robert Louis Stevenson State Park **COUNTY:** Sonoma

DESCRIPTION OF THE NATURE AND PURPOSE OF PROJECT: Repair park entrance roadway, culverts, and wooden embankment supports (revetments) damaged by winter storms in 2006. The Federal Emergency Management Agency (FEMA) has provided funding for this project. The road section in need of repair is 4,750 feet long by approximately 10 feet wide. Remove storm debris from roadway, roadside ditch, and existing culverts. Clear and restore ditch to original condition. Replace one 30-foot long by 24-inch diameter damaged culvert, and others if needed. Remove and replace four damaged wooden embankment supports used to stabilize the roadway from below. Road paving preparation consists of pavement removal, scarification, and rough grading, followed by importation of 880 cubic yards of road base stone. Road paving includes resurfacing with 5,278 cubic yards of asphalt applied two inches thick. The project only includes repairs to the existing road alignment and features. Equipment staging and storage areas are located on existing graded gravel and paved surfaces. If, at any time, the project manager enlarges or moves the designated construction area or equipment staging areas, the project manager will notify the California State Parks district historian prior to proceeding with project changes.
